BXPC3 Transfection Kit (for Pancreatic Cancer Cells, CRL-1687)

Catalog No. 6320  Size: 0.5 ml
Catalog No. 6321  Size: 1.5 ml
Catalog No. 6322  Size: 8.0 ml

Contents and Shipping:
BXPC3 Transfection Kit includes BXPC3 Transfection Reagent (0.5 ml / 1.5 ml / 8.0 ml), Transfection Enhancer (0.5 ml), and Complex Condenser (0.5 ml). BXPC3 Transfection Reagent is supplied in liquid form at a concentration of 0.3 mg/ml, shipped at ambient temperature.

Description:
Two component lipid-based proprietary formulation optimized for BXPC3 cells transfection.

Product Qualification:
BXPC3 Transfection Reagent is tested functionally by transfection of BXPC3 cells with a small interfering RNAs targeting 3 different genes (Lamin A/C, GAPDH, Cyclophilin B). Transfection Reagent is tested for absence of nuclease contamination and microbial contamination.

Storage:
Store reagent at 4°C upon receipt. If stored properly, reagent is stable for 6 months.

Intended Use:
For in vitro use only.

MSDS:
MSDS documents are available online at www.altogen.com

In Vivo Transfection Kits (for compound testing in rodents):
• Catalog #5010 / 5011 / 5012 - Lipid In Vivo Transfection Kit
• Catalog #5020 / 5021 / 5022 - Polymer In Vivo Transfection Kit
• Catalog #5030 / 5031 / 5032 - Nanoparticle In Vivo Transfection Kit
• Catalog #5040 / 5041 / 5042 - PEG-Liposome In Vivo Transfection Kit
• Catalog #5050 / 5051 / 5052 - Pancreas In Vivo Transfection Kit
• Catalog #5060 / 5061 / 5062 - Liver In Vivo Transfection Kit
• Catalog #5070 / 5071 / 5072 - Kidney In Vivo Transfection Kit

Transfection Controls and Recommended Products:
• Catalog #4060 - GFP-expressing plasmid DNA (25 ug)
• Catalog #4061 - Cell Cycle Arrest siRNA (5 nmol)
• Catalog #4062 - Apoptosis Inducing siRNA (5 nmol)

To Place an Order:
Both domestic (USA) and international orders can be placed online (www.altogen.com) using credit card payment. Purchase Order (PO) can be faxed at (702) 989-0841 (for USA only).

Recommended Transfection Protocols (for 24-well plate):

**BXPC3 Standard Transfection Protocol (24-well plate):**

1. Plate 10,000 - 15,000 BXPC3 cells per well in 0.5 ml of complete growth medium 12-24 hours prior to transfection.
2. Wash with 1xPBS and add 0.5 ml of fresh growth medium.
3. Prepare transfection complexes by mixing 40 µl of serum-free medium, 5 µl of transfection reagent, and
   - 750 ng DNA (or mRNA), or
   - 30 nM - 50 nM of siRNA (or microRNA)
   *Referred to a final volume including growth medium
4. Incubate transfection complexes at RT for 15 - 30 minutes.
5. Optional: Add 2 µl of Complex Condenser. This reagent reduces the size of transfection complex, therefore increasing transfection efficiency; however it may increase cell toxicity.
6. Add prepared transfection complexes to 0.5 ml of complete growth medium with BXPC3 cells (from step 2).
7. Incubate cells at 37°C in a humidified CO₂ incubator.
8. Assay for phenotype or target gene expression 48 - 72 hours after transfection.

Optional: Transfection efficiency can be increased by addition of Transfection Enhancer reagent. Add 2 µl of Transfection Enhancer reagent 12-24 hours after transfection.

If the viability of BXPC3 cells being transfected is affected at 16 - 24 hours post-transfection, the level of cytotoxicity can be decreased by changing the growth medium and eliminating redundant exposure of cells to transfectant.

**BXPC3 Reverse Transfection Protocol (24-well plate):**

1. Prepare BXPC3 cell suspension: a. Trypsinize cells (0.05% Trypsin) for 3-5 minutes at 37°C.
b. Dilute in complete growth medium to 5 x 10⁴ cells/ml.
2. Prepare transfection complexes by mixing 40 µl of serum-free medium, 5 µl of transfection reagent, and
   - 750 ng DNA (or mRNA), or
   - 30 nM - 50 nM of siRNA (or microRNA)
   *Referred to a final volume including growth medium
3. Incubate transfection complexes at RT for 15 - 30 minutes.
4. Optional: Add 2 µl of Complex Condenser. This reagent reduces the size of transfection complex, therefore increasing transfection efficiency; however it may increase cell toxicity.
5. Plate 20,000 - 30,000 cells per well in 0.5 ml of complete growth medium (from step #1) into culture plate.
6. Add prepared transfection complexes (from step 3 or 4).
7. Incubate cells at 37°C in a humidified CO₂ incubator.
8. Assay for phenotype or target gene expression 48 - 72 hours after transfection.

Optional: Transfection efficiency can be increased by addition of Transfection Enhancer reagent. Add 2 µl of Transfection Enhancer reagent 12-24 hours after transfection.

If the viability of BXPC3 cells being transfected is affected at 16 - 24 hours post-transfection, the level of cytotoxicity can be decreased by changing the growth medium and eliminating redundant exposure of cells to transfectant.

### Optimizing Transfection:

To obtain the highest transfection efficiency, optimize transfection conditions by varying BXPC3 cell density and amount of transfection reagent. High passage of BXPC3 cells and use of antibiotics (or growth factors) may require using larger volumes of BXPC3 transfection reagent per reaction.

### Limited Use Label License:

The purchase of this product conveys to the purchaser the limited right to use the purchased amount of the product only to perform internal research for the sole benefit of the purchaser. This product is for research purposes only and is not for use in commercial applications of any kind. For information on obtaining additional rights, please contact Altogen Biosystems at orders@altogen.com.

### Limited Product Warranty:

This warranty limits our liability to replacement of this product. No other warranties of any kind, express or implied, including, without limitation, implied warranties of merchantability or fitness for a particular purpose, are provided by Altogen Biosystems.
