NCI-H1975 Transfection Kit (for Lung Adenocarcinoma Cells, CRL-5908)

Catalog No. 6854  Size: 0.5 ml  
Catalog No. 6855  Size: 1.5 ml  
Catalog No. 7067  Size: 8.0 ml

Contents and Shipping:
NCI-H1975 Transfection Kit includes NCI-H1975 Transfection Reagent (0.5 ml / 1.5 ml / 8.0 ml), Transfection Enhancer (0.5 ml), and Complex Condenser (0.5 ml). NCI-H1975 Transfection Reagent is supplied in liquid form at a concentration of 0.25 mg/ml, shipped at ambient temperature.

Description:
Cationic lipid based reagent is a proprietary formulation optimized for transfection of DNA and RNA into NCI-H1975 cells.

Product Qualification:
NCI-H1975 Transfection Reagent is tested functionally by transfection of NCI-H1975 cells with a small interfering RNAs targeting 3 different genes (Lamin A/C, GAPDH, Cyclophilin B). Transfection Reagent is tested for absence of nuclease contamination and microbial contamination.

Storage:
Store reagent at 4°C upon receipt. If stored properly, reagent is stable for 6 months.

Intended Use:
For in vitro use only.

MSDS:
MSDS documents are available online at www.altogen.com

In Vivo Transfection Kits (for compound testing in rodents):
- Catalog #5010 / 5011 / 5012 - Lipid In Vivo Transfection Kit
- Catalog #5020 / 5021 / 5022 - Polymer In Vivo Transfection Kit
- Catalog #5030 / 5031 / 5032 - Nanoparticle In Vivo Transfection Kit
- Catalog #5040 / 5041 / 5042 - PEG-Liposome In Vivo Transfection Kit
- Catalog #5050 / 5051 / 5052 - Pancreas In Vivo Transfection Kit
- Catalog #5060 / 5061 / 5062 - Liver In Vivo Transfection Kit
- Catalog #5070 / 5071 / 5072 - Kidney In Vivo Transfection Kit

Transfection Controls and Recommended Products:
- Catalog #4060 - GFP-expressing plasmid DNA (25 ug)
- Catalog #4061 - Cell Cycle Arrest siRNA (5 nmol)
- Catalog #4062 - Apoptosis Inducing siRNA (5 nmol)

To Place an Order:
Both domestic (USA) and international orders can be placed online (www.altogen.com) using credit card payment. Purchase Order (PO) can be faxed at (702) 989-0841 (for USA only).

Recommended Transfection Protocols (for 24-well plate):

**NCI-H1975 Standard Transfection Protocol (24-well plate):**

1. Plate 7,500 - 12,000 NCI-H1975 cells per well in 0.5 ml of complete growth medium 12–24 hours prior to transfection
2. Wash with 1xPBS and add 0.5 ml of fresh growth medium
3. Prepare transfection complexes by mixing 40 µl of serum-free medium, 5.5 µl of transfection reagent, and
   - 750 ng DNA (or mRNA), or
   - 30 nM - 50 nM of siRNA (or microRNA)
   *Referred to a final volume including growth medium
4. Incubate transfection complexes at RT for 15 - 30 minutes
5. Optional: Add 2 µl of Complex Condenser. This reagent reduces the size of transfection complex, therefore increasing transfection efficiency; however it may increase cell toxicity
6. Add prepared transfection complexes to 0.5 ml of complete growth medium with NCI-H1975 cells (from step 2)
7. Incubate cells at 37°C in a humidified CO₂ incubator
8. Assay for phenotype or target gene expression 48 - 72 hours after transfection

**NCI-H1975 Reverse Transfection Protocol (24-well plate):**

1. Prepare NCI-H1975 cell suspension:
   a. Trypsinize cells (0.05% Trypsin) for 3-5 minutes at 37°C
   b. Dilute in complete growth medium to 5 x 10⁴ cells/ml
2. Prepare transfection complexes by mixing 40 µl of serum-free medium, 5.5 µl of transfection reagent, and
   - 750 ng DNA (or mRNA), or
   - 30 nM - 50 nM of siRNA (or microRNA)
   *Referred to a final volume including growth medium
3. Incubate transfection complexes at RT for 15 - 30 minutes
4. Optional: Add 2 µl of Complex Condenser. This reagent reduces the size of transfection complex, therefore increasing transfection efficiency; however it may increase cell toxicity
5. Plate 15,000 - 25,000 cells per well in 0.5 ml of complete growth medium (from step #1) into culture plate
6. Add prepared transfection complexes (from step 3 or 4)
7. Incubate cells at 37°C in a humidified CO₂ incubator
8. Assay for phenotype or target gene expression 48 - 72 hours after transfection

Optional: Transfection efficiency can be increased by addition of Transfection Enhancer reagent. Add 2 µl of Transfection Enhancer reagent 12-24 hours after transfection

If the viability of NCI-H1975 cells being transfected is affected at 16 - 24 hours post-transfection, the level of cytotoxicity can be decreased by changing the growth medium and eliminating redundant exposure of cells to transfectant

**Optimizing Transfection:**

To obtain the highest transfection efficiency, optimize transfection conditions by varying NCI-H1975 cell density and amount of transfection reagent. High passage of NCI-H1975 cells and use of antibiotics (or growth factors) may require using larger volumes of NCI-H1975 transfection reagent per reaction.

**Limited Use Label License:**

The purchase of this product conveys to the purchaser the limited right to use the purchased amount of the product only to perform internal research for the sole benefit of the purchaser. This product is for research purposes only and is not for use in commercial applications of any kind. For information on obtaining additional rights, please contact Altogen Biosystems at orders@altogen.com.

**Limited Product Warranty:**

This warranty limits our liability to replacement of this product. No other warranties of any kind, express or implied, including, without limitation, implied warranties of merchantability or fitness for a particular purpose, are provided by Altogen Biosystems. Altogen Biosystems shall have no liability for any direct, indirect, consequential, or incidental damages arising out of the use, the results of use, or the inability to use this product. This product is developed, manufactured and sold for research purposes only. Reagent is not suitable for administration to humans.
